

HYBRID TE WR340 TE HYBR 200 WR340

SAIREM's hybrid T in combination with two sliding short-circuits is used to match a load fed by a high power generator, especially if the load returns much reflected power. In this case the generator and the load are in line, and the sliding short-circuits are mounted on E and H ports.

REF	TE HYBR 200 WR340
Frequency	2450 MHz \pm 25 MHz
Power	10 kW
Output	WR340
Weight	4.250 kg
Material	Painted brass
